Product description

The New MAGNA1 model C circulator pumps are designed for circulating liquids in the following systems:

- heating systems
 - main pump
 - mixing loops
 - domestic hot-water systems
 - heating surfaces
 - air-conditioning surfaces
- air-conditioning and cooling systems
- ground-source heat-pump systems
- solar-heating systems.

The pumps are designed for circulating liquids in heating systems with variable flow rates. The pumps are also suitable for domestic hot-water systems. We strongly recommend that you use stainless-steel pumps in domestic hot-water systems to avoid corrosion.

To ensure correct operation, it is important that the sizing range of the system falls within the duty range of the pump.

Duty range

Data	MAGNA1 (N) single-head pumps	MAGNA1 D twin-head pumps
Maximum flow rate, Q	71 m ³ /h	110 m ³ /h
Maximum head, H	18 metres	
Maximum system pressure	1.6 MPa (16 bar)	
Liquid temperature	-10 to 110 °C	

Fig. 1 Single-head MAGNA1 pumps

TM05 5863 4112 - TM06 9077 3617

Characteristic features

- Proportional-pressure control
- constant-pressure control
- constant-curve, constant-speed duty
- no external motor protection required
- insulating shells supplied with single-head pumps for heating systems
- wide temperature range due to thermal separation of the control box and pumped media.

Benefits

- Fault relay
- Digital input (start/stop)
- Wireless multipump function with time based alternation
- Simple installation
- LED indication of the control mode
- Low noise level
- No maintenance and long life
- The complete range is available for a maximum system pressure of 16 bar (PN 16).
- The new MAGNA1 is designed to communicate with Grundfos GO Remote, which allows you to:
 - Adjust the setpoint of the proportional pressure curve
 - Manage the fault-relay trigger setting in twin-head pumps
 - Read warning and alarm indications

A quick guide to pump selection

Before sizing and selecting your pump, make sure that the pump's operating conditions are fulfilled:

- liquid quality and temperature
- ambient conditions
- minimum inlet pressure
- maximum operating pressure

See section 3. *Operation*.

Pump size

In order to choose a pump for a heating system, it is necessary to know both the system characteristics and the pump curve. The pump is dimensioned so it can provide an adequate performance at the maximum system load.

Determining the size of your pump depends on the following:

- the required maximum flow rate (Q).
- the maximum pressure loss in the system (H).

By marking the values in a curve chart, you find your duty point. The x-axis shows the flow rate (Q), while the y-axis shows the pressure (H). See fig. 4.

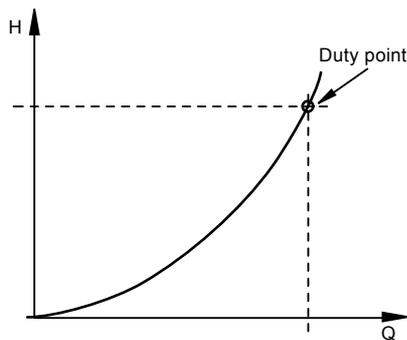

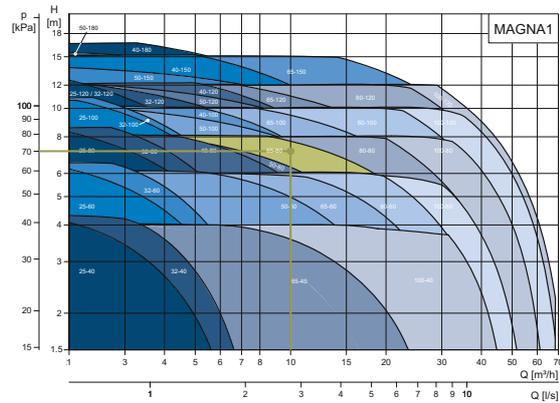

Fig. 4 System characteristic

TMD2 2040 3301

Go to *Performance range, MAGNA1*, and mark your duty point. The field in which your duty point is placed, is an indication of which pump is best suited for your application. See fig. 5.

TMD070322

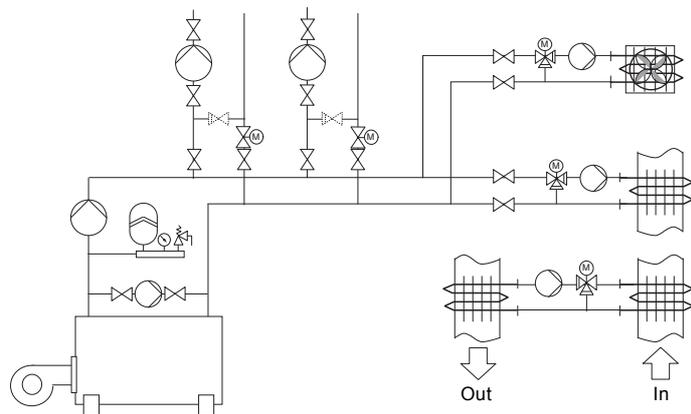

Fig. 5 Pump selection

Find the specific pump data in the section 7. *Performance curves and technical data*. This information will help you determine whether you have found the correct pump size or not.

Note: To ensure an efficient operation it is important not to oversize the pump. All pumps have a "best point" (η_{max}), indicating where the pump is working most efficiently. When operating at your duty point, the pump must work in the most efficient Q and H area.

System applications

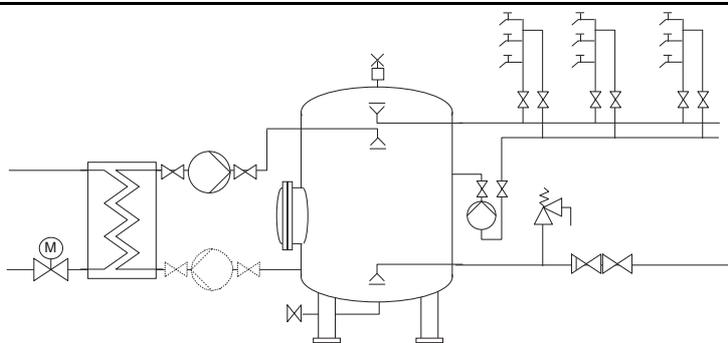

Heating systems

- One- and two-pipe heating systems
- main pumps
- zone pumps
- mixing loops
- boiler shunt pumps
- pumps for heating surfaces
- calorifiers
- underfloor heating systems
- solar-heating systems
- ground-source heat-pump systems
- heat recovery systems.

TM01 0188 0697

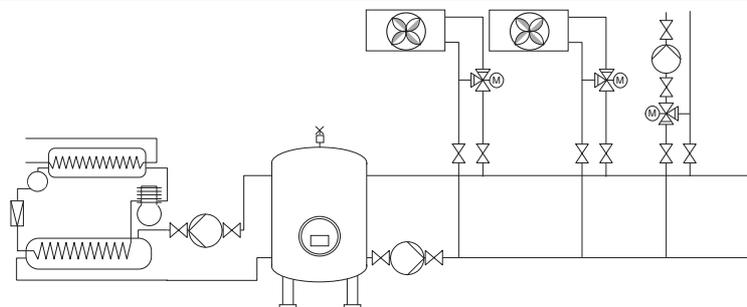

Domestic hot-water systems

- Domestic hot-water systems

TM01 0188 0697

Air-conditioning and cooling systems

- Two-pipe air-conditioning systems
- main pumps
- zone pumps
- pumps for refrigeration units
- heat pump systems
- ground-source heat-pump systems
- heat recovery systems
- air-conditioning surfaces.

TM01 0170 0697

2. Construction

MAGNA1 is of the canned-rotor type, which means that pump and motor form an integral unit without shaft seal and with only two gaskets for sealing. The bearings are lubricated by the pumped liquid.

The pump is characterised by the following:

- controller integrated in the control box
- operating panel on the control box
- twin-head versions
- no external motor protection required
- insulating shells supplied with single-head pumps for heating systems.

Motor and electronic controller

The pump incorporates a 4-pole synchronous, permanent-magnet motor (PM motor). This motor type is characterised by higher efficiency than a conventional asynchronous squirrel-cage motor.

The pump speed is controlled by an integrated frequency converter.

Pump connections

Threaded pipe connections according to ISO 228-1.

Flange dimensions according to EN 1092-2.

Surface treatment

The pump housing and pump head are electrocoated to improve the corrosion resistance.

Electrocoating includes:

- alkaline cleaning
- pretreatment with zinc phosphate coating
- cathodic electrocoating (epoxy)
- curing of paint film at 200-250 °C.

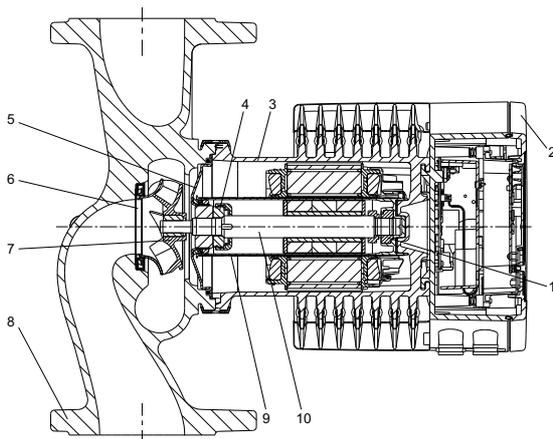

The pump housing of stainless-steel versions is not treated and painted and appears in blank steel. See fig. 6.

Rotor can materials

Pos.	Component	Material	EN
1	Outer bearing ring	Aluminium oxide	
2	Control box	Polycarbonate	
3	Stator housing	Aluminium	
	O-rings and gaskets	EPDM	
4	Thrust bearing	Aluminium oxide or carbon	
5	Bearing plate	Stainless steel	EN 1.4301
6	Neck ring	Stainless steel	EN 1.4301
7	Impeller	PES	
8	Pump housing	Cast iron or stainless steel	EN 1561 EN-GJL-250/EN 1.4408
9	Rotor can	PPS or stainless steel	
10	Shaft	Ceramics, plug connected versions	
10	Shaft	Stainless steel, terminal-connected versions	EN 1.4404

3. Operation

Operating conditions

General recommendations

Water in heating systems	Water quality according to local standards such as the German standard VDI 2035
Water containing glycol	Maximum viscosity = 10-50 cSt ~ 50 % water and 50 % glycol at -10 °C

Liquid temperature

-10 to 110 °C.

Location

The pump is designed for indoor installation.

Always install the pump in an dry environment where it will not be exposed to drops or splashes, for example water, from surrounding equipment or structures.

As the pump contains stainless-steel parts, it is important that it is not installed directly in environments, such as:

- Indoor swimming pools where the pump would be exposed to the ambient environment of the pool.
- Locations with direct and continuous exposure to a marine atmosphere.
- In rooms where hydrochloric acid (HCl) can form acidic aerosols escaping from, for example, open tanks or frequently opened or vented containers.

The above applications do not disqualify for installation of MAGNA1. However, it is important that the pump is not installed directly in these environments.

Ambient conditions

Ambient temperature during operation	0-40 °C
Ambient temperature during storage and transport	-40 to 70 °C
Relative humidity	Maximum 95 %

Maximum operating pressure

PN 6: 6 bar or 0.6 MPa.

PN 10: 10 bar or 1.0 MPa.

PN 16: 16 bar or 1.6 MPa.

Minimum inlet pressure

The following relative minimum inlet pressure must be available at the pump inlet during operation to avoid cavitation noise and damage to the pump bearings.

Note: The values in the table below apply to single-head pumps and twin-head pumps in single-head operation.

Single-head pumps DN	Liquid temperatures		
	75 °C	95 °C	110 °C
	Inlet pressure [bar] / [MPa]		
25-40/60/80/100/120	0.10 / 0.01	0.35 / 0.035	1.0 / 0.10
32-40/60/80/100/120	0.10 / 0.01	0.35 / 0.035	1.0 / 0.10
32-120 F	0.10 / 0.01	0.20 / 0.020	0.7 / 0.07
40-40/60 F	0.10 / 0.01	0.35 / 0.035	1.0 / 0.10
40-80/100/120/150/180 F	0.10 / 0.01	0.50 / 0.05	1.0 / 0.10
50-60/80 F	0.10 / 0.01	0.40 / 0.04	1.0 / 0.10

Single-head pumps DN	Liquid temperatures		
	75 °C	95 °C	110 °C
	Inlet pressure [bar] / [MPa]		
50-100/120 F	0.10 / 0.01	0.50 / 0.05	1.0 / 0.10
50-150/180 F	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17
65-40/60/80/100/120/150 F	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17
80-60/80/100/120 F	0.50 / 0.05	1.00 / 0.10	1.5 / 0.15
100-40/60/80/100/120 F	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17

In the case of manual synchronous operation, the required relative inlet pressure must be increased by 0.1 bar or 0.01 MPa compared to the stated values for single-head pumps or twin-head pumps in single-head operation.

Note: The actual inlet pressure plus pump pressure against a closed valve must be lower than the maximum permissible system pressure.

The relative minimum inlet pressures apply to pumps installed up to 300 metres above sea level. For altitudes above 300 metres, the required relative inlet pressure must be increased by 0.01 bar or 0.001 MPa per 100 metres altitude. The pump is only approved for an altitude of 2000 metres above sea level.

Sound pressure level

The sound pressure level of the pump is dependent on the power consumption. Levels are determined in accordance with ISO 3745 and ISO 11203, method Q2.

Pump size	Max dB(A)
25-40/60/80/100/120	39
32-40/60/80/100/120	
40-40/60	
50-40	
32-120 F	45
40-80/100	
50-60/80	
65-40/60	
80-40	
40-120/150/180	50
50-100/120/150/180	
65-80/100/120	
80-60/80	
100-40/60	
65-150	55
80-100/120	
100-80/100/120	

Closed valve operation

The pump can operate at any speed against a closed valve for several days without damage to the pump. However, Grundfos recommends you to operate at the lowest possible speed curve to minimise energy losses. There are no minimum flow requirements.

Note: Do not close inlet and outlet valves simultaneously, always keep one open when the pump is running. Media and ambient temperatures must never exceed the specified temperature range.

Pumped liquids

The pump is suitable for thin, clean, non-aggressive liquids, not containing solid particles or fibres that may attack the pump mechanically or chemically.

In heating systems, the water must meet the requirements of accepted standards on water quality in heating systems, for example the German standard VDI 2035.

In domestic hot-water systems, we recommend that you keep the liquid temperature below 65 °C to eliminate the risk of lime precipitation.

Do not use the pump for flammable, combustible or explosive liquids, such as diesel oil and petrol.

Do not use the pump for aggressive liquids, such as acids and seawater.

If the pump is not used during periods of frost, take the necessary steps to prevent frost bursts.

Additives with a density or kinematic viscosity higher than that of water will reduce the hydraulic performance.

Do not use additives that in any way can or will disturb the functionality of the pump.

Whether a pump is suitable for a particular liquid depends on a number of factors of which the most important are lime content, pH value, temperature and content of solvents and oils.

You can use the pump for pumping water or glycol mixtures up to 50 %. See section [General recommendations](#) on page 13.

The pumping of glycol mixtures reduces the hydraulic performance.

Electrical data

Pump type	MAGNA1 (D).
Enclosure class	IPX4D (EN 60529).
Insulation class	F.
Supply voltage	1 x 230 V ± 10 %, 50/60 Hz, PE.
Digital input	External potential-free contact. Contact load: 5 V, 10 mA. Screened cable. Loop resistance: Maximum 130 Ω.
Relay output	Maximum load: 250 V, 2 A, AC1. Minimum load: 5 VCD, 20 mA. Screened cable, depending on signal level.
Leakage current	$I_{\text{leakage}} < 3.5 \text{ mA}$. The leakage current is measured in accordance with EN 60335-1.
EMC	EN 55014-1:2006, EN 55014-2:1998, EN 61000-3-3:2013 and EN 61000-3-2:2006.

4. Installation

Mechanical installation

The pump is designed for indoor installation.

The pump must be installed with horizontal motor shaft.

The pump may be installed in horizontal as well as vertical pipes.

Fig. 9 Installation positions

Arrows on the pump housing indicate the liquid flow direction through the pump.

The control box must be in the horizontal position with the Grundfos logo in the vertical position. See fig. 9.

This is described in the installation and operating instructions, which will be released together with the product launch.

net.grundfos.com/qr/i/99209952

The pump must be installed in such a way that it is not stressed by the pipes.

The pump may be suspended directly in the pipes, provided that the pipes can support the pump. Twin-head pumps are prepared for installation on a mounting bracket or base plate.

To ensure adequate cooling of motor and electronics, the following must be observed:

- Make sure that the control box is in horizontal position with the Grundfos logo in vertical position. The ambient temperature must not exceed 40 °C.

Insulating shells

The insulating shells supplied with single-head pumps are for heating systems and must be fitted as part of the installation.

Insulating shells for pumps for air-conditioning and cooling systems are available as an accessory.

See section *Insulating kits for air-conditioning and cooling systems* on page 108.

Note: Insulating shells are not available for twin-head pumps.

Electrical installation

The electrical connection and protection must be carried out in accordance with local regulations.

- The pump must be connected to an external main switch.
- The pump must always be correctly earthed.
- The pump requires no external motor protection.
- The pump incorporates thermal protection against slow overloading and blocking.
- When switched on via the power supply, the pump will start pumping after approximately 5 seconds.

Note: The number of starts and stops via the power supply must not exceed four times per hour.

The main connection of the pump must be made as shown in fig. 10 on page 16.

Cables

All cables used must be connected in accordance with local regulations.

Additional protection

If the pump is connected to an electric installation where an earth leakage circuit breaker (ELCB), residual-current device (RCD) or residual-current circuit device (RCCB) is used as an additional protection, this circuit breaker must trip when earth fault currents with DC content (pulsating DC) occur.

The earth leakage circuit breaker must be marked with the first or both of the symbols shown below:

Symbol	Description

Control modes

Proportional-pressure curve (PP1, PP2 or PP3)

Proportional-pressure control adjusts the pump performance to the actual flow demand in the system, but the pump performance follows the selected performance curve, PP1, PP2 or PP3. See fig. 15 where PP2 has been selected.

For further information, see section [Control modes](#) on page 18.

TM05 5555 3812

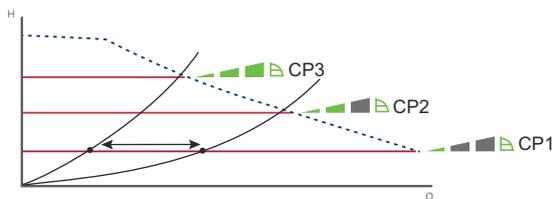

Fig. 15 Three proportional-pressure curves or settings

The selection of the right proportional-pressure setting depends on the characteristics of the system in question and the actual flow demand.

Constant-pressure curve (CP1, CP2 or CP3)

Constant-pressure control adjusts the pump performance to the actual flow demand in the system, but the pump performance follows the selected performance curve, CP1, CP2 or CP3. See fig. 16 where CP1 has been selected.

For further information, see section [Control modes](#) on page 18.

TM05 5556 3812

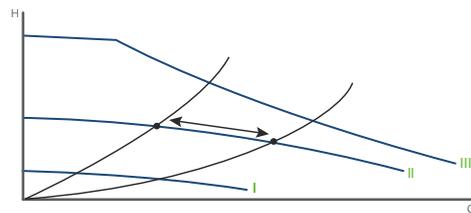

Fig. 16 Three constant-pressure curves or settings

The selection of the right constant-pressure setting depends on the characteristics of the system in question and the actual flow demand.

Constant curve or constant speed (I, II or III)

In constant-curve or constant-speed operation, the pump runs at a constant speed, independent of the actual flow demand in the system. The pump performance follows the selected performance curve, I, II or III. See fig. 17 where II has been selected.

For further information, see section [Control modes](#) on page 18.

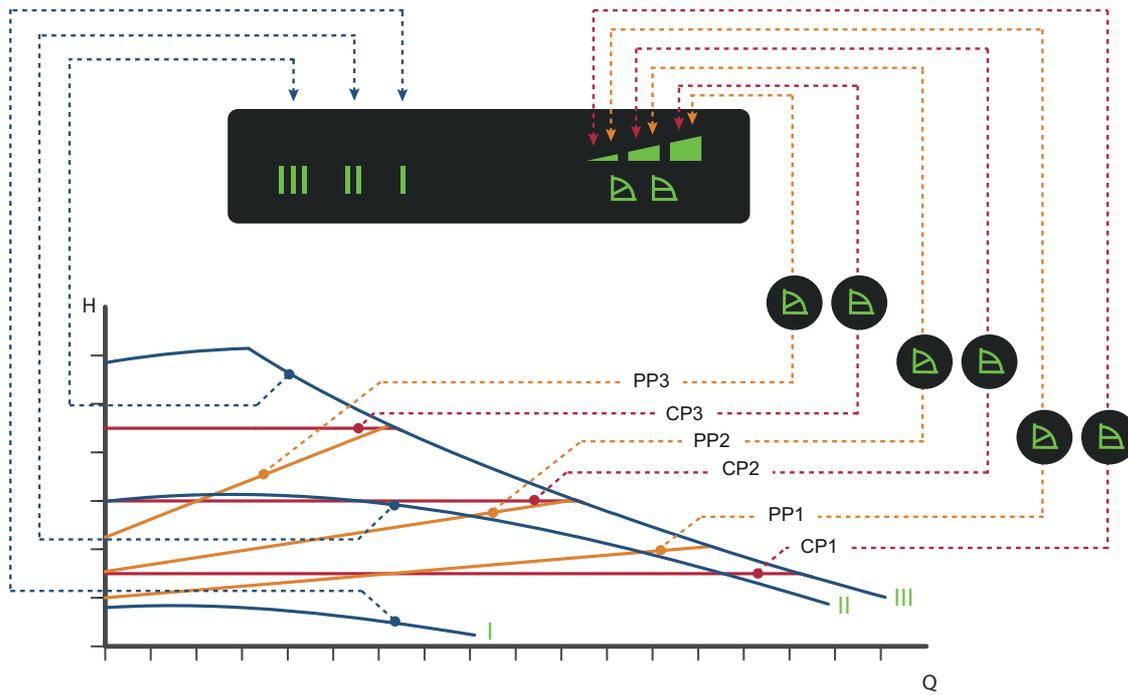

TM05 5557 3812

Fig. 17 Three constant-curve or constant-speed settings

The selection of the right constant-curve or constant-speed setting depends on the characteristics of the system in question.

Overview of the control modes

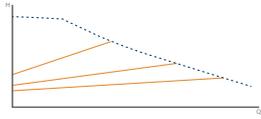

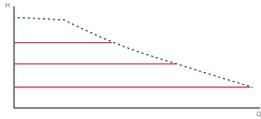

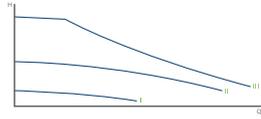

TM05 2776 3617

Fig. 18 Control mode in relation to system requirements

Setting	Pump curve	Function
PP1	Lowest proportional-pressure curve	The duty point of the pump will move up or down on the lowest proportional-pressure curve, depending on the flow demand. The head (pressure) is reduced at falling heat demand and increased at rising flow demand.
PP2	Intermediate proportional-pressure curve	The duty point of the pump will move up or down on the intermediate proportional-pressure curve, depending on the flow demand. The head (pressure) is reduced at falling flow demand and increased at rising flow demand.
PP3	Highest proportional-pressure curve	The duty point of the pump will move up or down on the highest proportional-pressure curve, depending on the flow demand. The head (pressure) is reduced at falling flow demand and increased at rising flow demand.
CP1	Lowest constant-pressure curve	The duty point of the pump will move out or in on the lowest constant-pressure curve, depending on the flow demand in the system. The head (pressure) is kept constant, irrespective of the flow demand.
CP2	Intermediate constant-pressure curve	The duty point of the pump will move out or in on the intermediate constant-pressure curve, depending on the flow demand in the system. The head (pressure) is kept constant, irrespective of the flow demand.
CP3	Highest constant-pressure curve	The duty point of the pump will move out or in on the highest constant-pressure curve, depending on the flow demand in the system. The head (pressure) is kept constant, irrespective of the flow demand.
III	Speed III	The pump runs on a constant curve which means that it runs at a constant speed. At speed III, the pump is set to run on the maximum curve under all operating conditions. Quick venting of the pump can be obtained by setting the pump to speed III for a short period.
II	Speed II	The pump runs on a constant curve which means that it runs at a constant speed. At speed II, the pump is set to run on the intermediate curve under all operating conditions.
I	Speed I	The pump runs on a constant curve which means that it runs at a constant speed. At speed I, the pump is set to run on the minimum curve under all operating conditions.

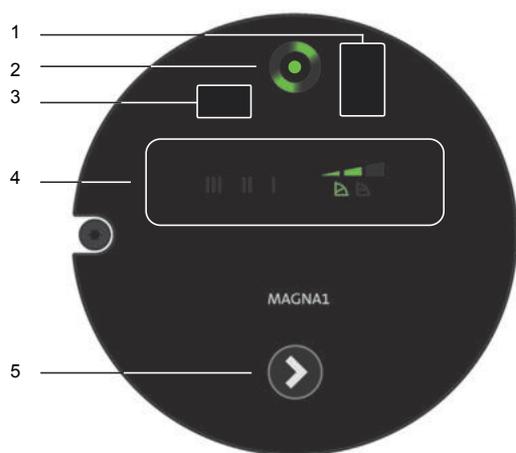

Selecting control mode

System application	Select this control mode
<p>In systems with relatively large pressure losses in the distribution pipes and in air-conditioning and cooling systems.</p> <ul style="list-style-type: none"> Two-pipe heating systems with thermostatic valves and <ul style="list-style-type: none"> very long distribution pipes strongly throttled balancing valves differential-pressure regulators large pressure losses in those parts of the system through which the total quantity of water flows, for example a boiler, a heat exchanger and a distribution pipe up to the first branching. Primary circuit pumps in systems with large pressure losses in the primary circuit. Air-conditioning systems with <ul style="list-style-type: none"> heat exchangers (fan coils) cooling ceilings cooling surfaces. 	<p>Proportional pressure</p> 
<p>In systems with relatively small pressure losses in the distribution pipes.</p> <ul style="list-style-type: none"> Two-pipe heating systems with thermostatic valves and <ul style="list-style-type: none"> dimensioned for natural circulation small pressure losses in those parts of the system through which the total quantity of water flows, for example a boiler, a heat exchanger and a distribution pipe up to the first branching or <ul style="list-style-type: none"> modified to a high differential temperature between the flow pipe and return pipe, for example district heating. Underfloor heating systems with thermostatic valves. One-pipe heating systems with thermostatic valves or pipe balancing valves. Primary circuit pumps in systems with small pressure losses in the primary circuit. 	<p>Constant pressure</p> 
<p>For operation according to the maximum or minimum curve, like an uncontrolled pump:</p> <ul style="list-style-type: none"> Use the maximum curve mode in periods in which a maximum flow rate is required. This operating mode is for instance suitable for hot-water priority in domestic hot-water systems. Use the minimum curve mode in periods in which a minimum flow rate is required. 	<p>Constant curve</p> 

Twin-head pump function

The twin-head pump function allows you to control twin-head pumps without the use of an external controller. The pumps operate in alternating mode, meaning that only one pump runs at a time. The two pumps communicate with each other via wireless connection and change from one pump to the other every 24 hours or if one of the pumps experiences an alarm.

Operating panel

TM06 9078 3617

Fig. 19 Operating panel at first startup

The operating panel on the pump comprises the following:

Pos.	Description
1	Infrared receiver, Grundfos GO MAGNA1 25-40 - 32-120
2	Grundfos Eye operating status.
3	Infrared receiver, Grundfos GO MAGNA1 32-40 F - 100-120 F
4	LED indication of the control mode
5	Push-button for selection of a control mode.

Grundfos Eye

Grundfos Eye is on when the power supply has been switched on. See 1 in fig. 19.

Grundfos Eye is an indicator light providing information about the actual pump status.

The indicator light will flash in different sequences and provide information about the following:

- power on or off
- pump running or stopped
- pump alarms
- twin-head connection.

LEDs indicating the control mode

The pump has nine optional performance settings which you can select with the push-button. See 3 in fig. 19.

The control mode is indicated by the LEDs in the display. The pump is factory set to proportional-pressure (PP2).

Button presses	Active light fields	Description
0		Intermediate proportional-pressure curve, referred to as PP2 Factory setting
1		Highest proportional-pressure curve, referred to as PP3
2		Lowest constant-pressure curve, referred to as CP1
3		Intermediate constant-pressure curve, referred to as CP2
4		Highest constant-pressure curve, referred to as CP3
5		Constant curve or constant speed III
6		Constant curve or constant speed II
7		Constant curve or constant speed I
8		Lowest proportional-pressure curve, referred to as PP1

Communication

Grundfos GO Remote

MAGNA1 single-head pumps are designed for infrared communication (IR) with Grundfos GO Remote, while MAGNA1 twin-head pumps can also communicate via radio.

You can use Grundfos GO Remote for the following:

- Adjusting the setpoint of the proportional-pressure curve
- Managing the fault-relay trigger setting in twin-head pumps
- Reading of warning and alarm indications.

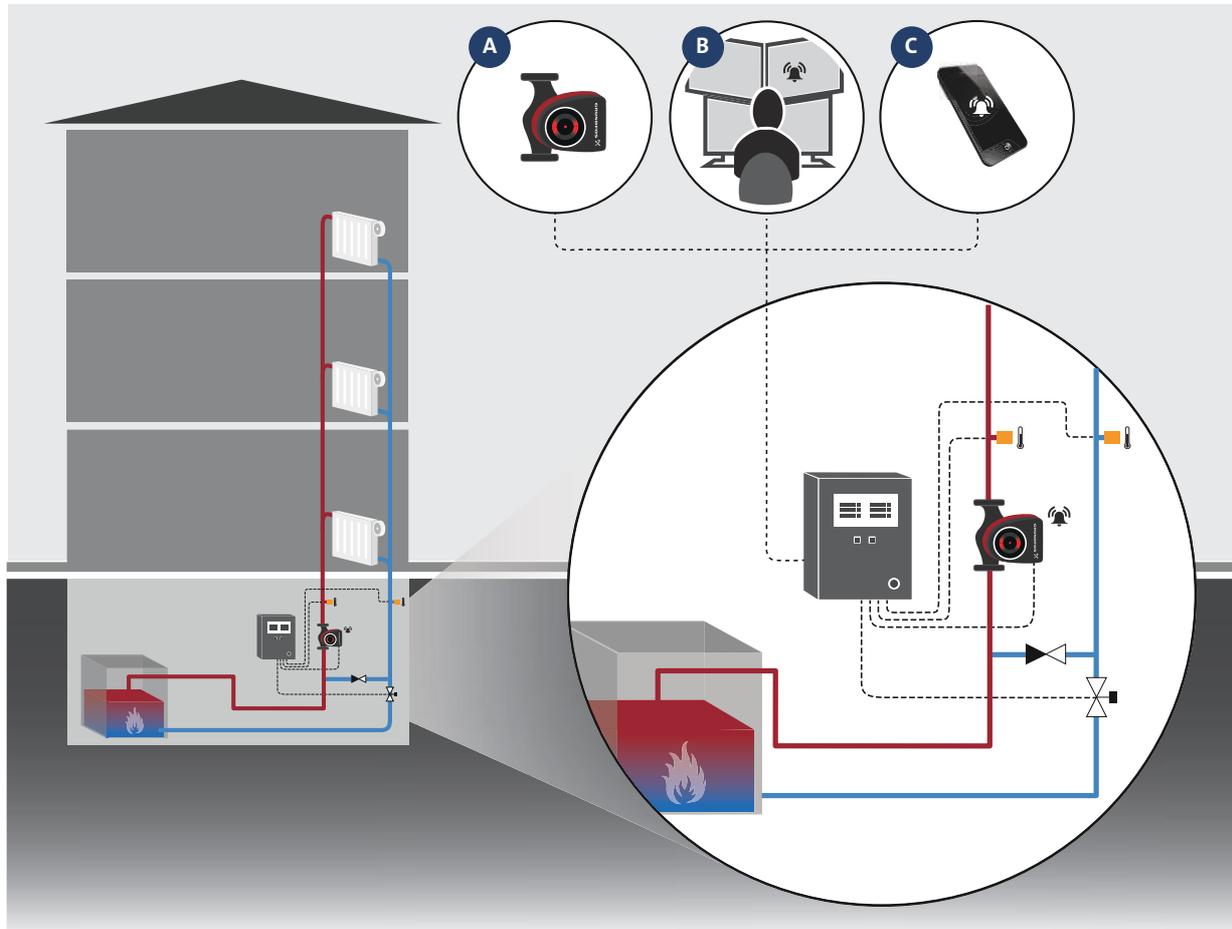

MAGNA1 also enables communication via the following:

- digital input (start/stop)
- relay output.

For further information, see section [External control and monitoring](#) on page 22.

External control and monitoring

Monitoring and controlling your system decreases the overall system downtime, and MAGNA1 model C offers several ways of meeting this demand. If the pump experiences a fault, the alarm relay sends a signal to the controller, which will subsequently trigger further events depending on your chosen strategy. See fig. 20.

TM06 8040 0317

Fig. 20 External control and monitoring

A: Local control and monitoring

The alarm relay output from the pump can be used to trigger other actions locally in the system, for example stopping a boiler. Other components in the system can use the "no fault signal" as part of an overall startup routine. If a twin-head pump experiences a fault on one of its heads, MAGNA1 will immediately shift to the other head, ensuring continuous operation.

B: Digital integration

SCADA integration ensures continuous monitoring of the entire application, including any faults on the pump. By using the digital input, the pumps can be started and stopped remotely.

C: Remote notifications

In addition to local control and monitoring, it is possible to use the alarm relay output to receive fault notifications on mobile devices, as long as your building management system allows it.

For more information, see sections [Connection to external control](#) on page 16, [Digital input](#) on page 17, and [Relay output](#) on page 17.

6. Performance curves

How to read the curve charts

Each control mode has its own performance curve, QH curve. A power curve, P1 curve, is associated with each QH curve. The power curve shows the power consumption of the pump, P1, in watt at a given QH curve.

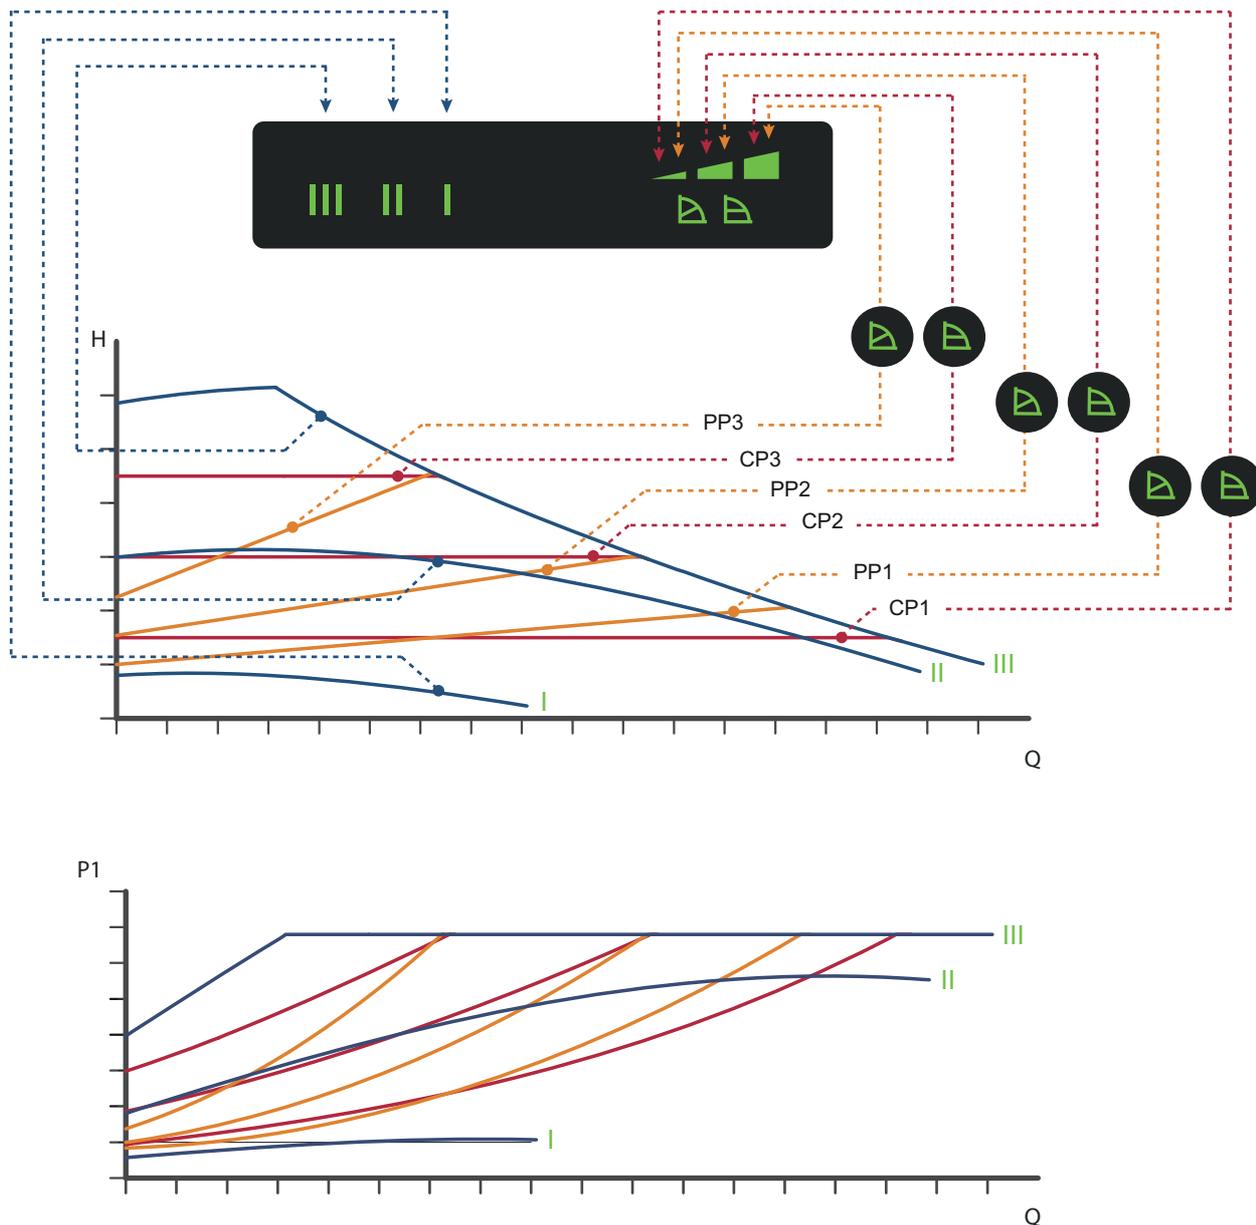

Fig. 21 Performance curves in relation to control modes

Setting	Pump curve
PP1	Lowest proportional-pressure curve
PP2	Intermediate proportional-pressure curve
PP3	Highest proportional-pressure curve
CP1	Lowest constant-pressure curve
CP2	Intermediate constant-pressure curve
CP3	Highest constant-pressure curve
III	Constant-curve duty, fixed speed III
II	Constant-curve duty, fixed speed II
I	Constant-curve duty, fixed speed I

TM05 2778 3617

Curve conditions

The guidelines below apply to the performance curves on pages 26 to 107:

- Test liquid: airless water.
- The curves apply to a density of $\rho = 998.2 \text{ kg/m}^3$ and a liquid temperature of $20 \text{ }^\circ\text{C}$.
- All curves show average values and must not be used as guarantee curves. If a specific minimum performance is required, make individual measurements.
- The curves apply to a kinematic viscosity of $\nu = 1.004 \text{ mm}^2/\text{s}$ (1.004 cSt).
- Reference supply voltage: 1 x 230 V, 50 Hz.
- Curves obtained according to EN 16297.

Symbols used on the following pages

The pump is energy-optimised and complies with the EuP Directive, Commission Regulation (EC) No 641/2009, which has been effective as from 1 January 2013.

For MAGNA1 model C single-head pumps, the energy efficiency index (EEI) is ≤ 0.20 .

Figure 22 shows the energy consumption index for a typical circulator pump compared to the various EEI limits.

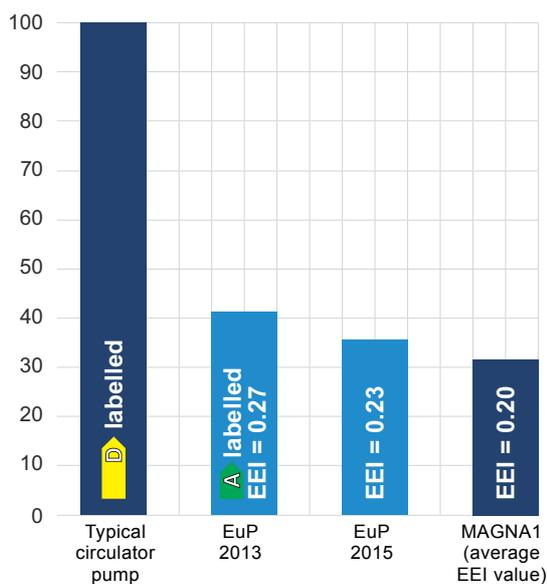

Fig. 22 Energy consumption index, single-head pumps

With an energy efficiency index (EEI) equal to the EuP 2015, you can achieve significant energy savings compared to a typical circulator pump and thus a remarkably fast return on investment.

Additional information

Use Grundfos GO Remote to scan the QR code on the pump and get the following information:

- product photo
- pump performance curves
- dimensional sketches
- wiring diagram
- quotation text
- technical data
- service parts list
- PDF files, such as data booklet and installation and operating instructions.

Fig. 23 QR code on the pump nameplate

Markings and approvals

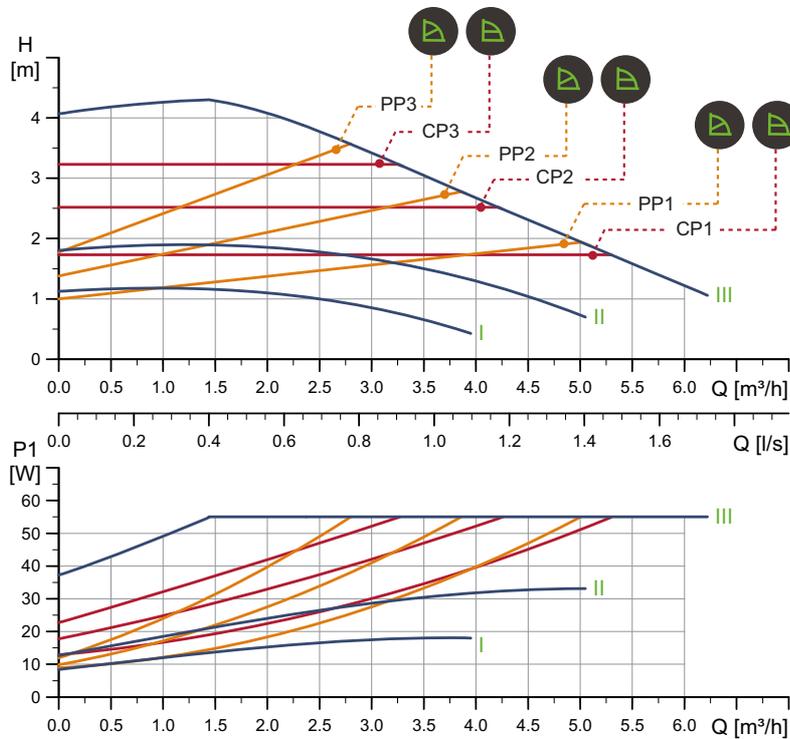

The following marks are available after positive testing of the pump:

Mark	Description
	The EC marking is based on the declaration of conformity issued by the manufacturer who certifies that the product meets all the appropriate provisions of the relevant legislation implementing certain European Directives.
	Electro-technical products including products according to the Product Safety Act (ProdSG) and medical products according to the Medical Product Act (MPG) according to German VDE/EN/IEC standards, other technical specifications as well as possible provisions of law with respect to safety and health requirements.
	Mark of Conformity in the Russia, Kazakhstan, Armenia, Kyrgyzstan and Belarus Customs Union for imports of Machinery and Industrial Equipment
	The product complies with the requirements of the United Kingdom Water Supply (Water Fittings) Regulations/Scottish Water Byelaws. Applies to the stainless-steel version only.
	The Turkish Standards Institute (TSE) certified that this product complies with the relevant directives and standards.
ACS	ACS - Attestation de Conformité Sanitaire. The suitability of this product to come into contact with water destined for human consumption has been evaluated and approved by a laboratory accredited by the French Ministry of Health.

7. Performance curves and technical data

MAGNA1 25-40 (N) PN 10

MAGNA1 65-60 F (N) PN 10

1 x 230 V, 50/60 Hz

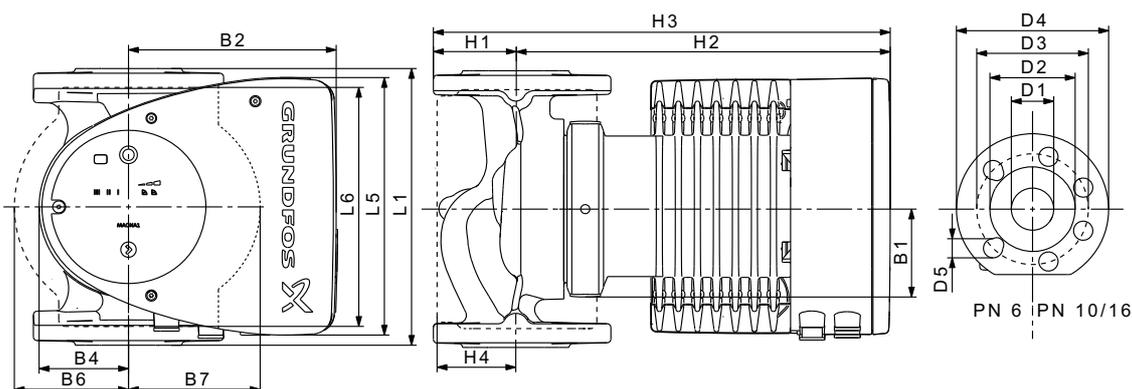

TM05 6301 4712

Speed	P1 [W]	I _{1/1} [A]
Min.	23.2	0.24
Max.	365	1.64

The pump incorporates overload protection.

Connections: See section [Pipe connection](#), page 110.
 System pressure: Max. 1.0 MPa (10 bar).
 Liquid temperature: -10 to 110 °C (TF 110).
 Also available with: Stainless-steel pump housing, type N.
 Specific EEI: 0.20

Net weight [kg]	Gross weight [kg]	Ship. vol. [m³]

8. Accessories

Insulating kits for air-conditioning and cooling systems

You can fit single-head pumps for air-conditioning and cooling systems with insulating shells. A kit consists of two shells made of polyurethane and a self-adhesive seal to ensure tight assembly.

TM05 5529 3812

Fig. 24 Fitting the insulating shells to a MAGNA1 pump

Note: The dimensions of the insulating shells for air-conditioning and cooling systems differ from those of the insulating shells for heating systems. You can use the insulating shells for both stainless-steel and cast-iron pumps.

MAGNA1 100-40/60/80/100/120 F	98164611

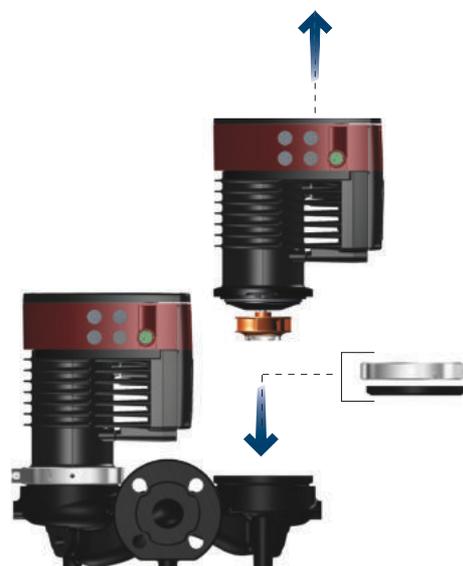

Note: Insulating shells for single-head pumps for heating systems are supplied with the pump.

Specifications

- Specific volume resistance $\geq 10^{15}$ Ωcm DIN 60093
- thermal conductivity at 10 °C 0.036 W/mK and at 40 °C 0.039 W/mK DIN 52612
- density 33 ± 5 kg/m³ ISO 845
- working temperature range -40 to +90 °C ISO 2796.

Blanking flanges

When you have removed one of the pumps of a twin-head pump for service, you can blank off the opening with a blanking flange to enable uninterrupted operation of the other pump.

Grundfos GO

MAGNA1 single-head pumps are designed for infrared communication (IR) with Grundfos GO Remote, while MAGNA1 twin-head pumps can also communicate via radio.

In order to communicate with Grundfos GO Remote via infrared, you need an add-on module. Various Grundfos GO variants are available. The variants are described in the following.

MI 204

MI 204 is an add-on module with built-in infrared and radio communication. You can use MI 204 in conjunction with an Apple iPhone or iPod with Lightning connector, e.g. a fifth generation iPhone or iPod.

TM05 7704 1513

Fig. 27 MI 204

Supplied with the product:

- Grundfos MI 204
- sleeve
- quick guide
- charger cable.

MI 301

MI 301 is a module with built-in infrared and radio communication. Use MI 301 in conjunction with an Android or iOS-based smart device with a Bluetooth connection. MI 301 has a rechargeable Li-ion battery and must be charged separately.

TM05 3890 1712

Fig. 28 MI 301

Supplied with the product:

- Grundfos MI 301
- battery charger
- quick guide.

Thread types

G-threads have a cylindrical form in accordance with the EN-ISO 228-1 standard. R-threads have a conical form in accordance with the ISO 7-1 standard. In the case of a thread of size 1 1/2 inch, the threads are specified as G 1 1/2 or R 1 1/2. You can only screw male G-threads (cylindrical) into female G-threads. You can screw male R-threads (conical) into female G- or R-threads. See fig. 30.

10. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

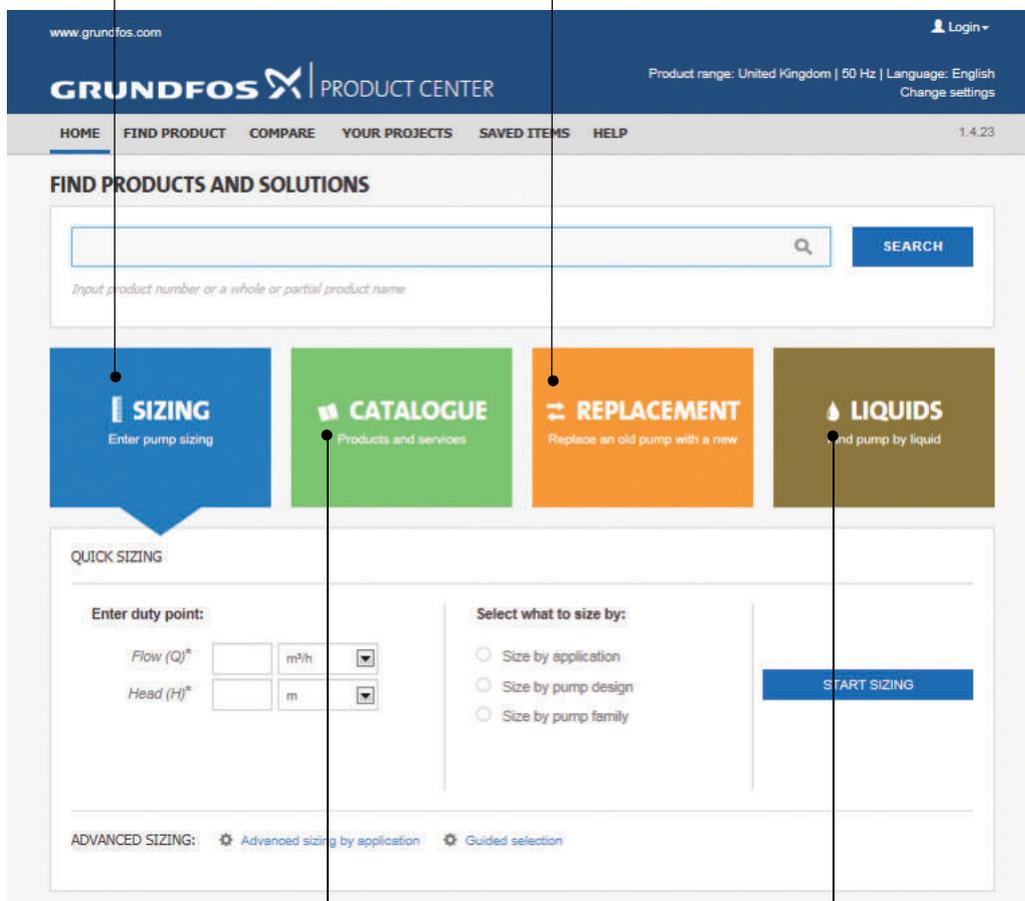

<http://product-selection.grundfos.com>

SIZING enables you to size a pump based on entered data and selection choices.

REPLACEMENT enables you to find a replacement product. Search results will include information on

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.

CATALOGUE gives you access to the Grundfos product catalogue.

LIQUIDS enables you to find pumps designed for aggressive, flammable or other special liquids.

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc. in PDF format.
